

FREQUENTLY ASKED QUESTIONS

What is An Agreement of Mutual Interest?

This Agreement of Mutual Interest forms part of the core foundational structure of the operations of the company. The Agreement of Mutual Interest in and of itself is an Intellectual Property that is in the form of this Agreement; it carries varying values that when bought into by persons, will further help to create more value by a Rate of Return (RoR). It also is like any other commodity as it can be directly promoted and sold within the market space.

This Agreement is a means of raising capital for continued operations, a way of giving back to contributor's who would buy into agreements and also a means of promoting growth and fostering a more service-oriented operation in general. Similar to crowdfunded projects; a larger pool of resources can be drawn or gathered from to contribute wholistically to the growth and further development of the operation.

Businesses often engage in activities of trading, sourcing, financing, marketing, networking etc. This is just our unique way of conducting business operations.

How many Agreements can I purchase?

Any person or company can purchase as many Agreements as they can afford too, once the Agreements are paid for in full.

What happens to the funds from Agreements bought?

When you buy an Agreement just like any other product, it is put to use. What we do with funds is run normal trading activities from our exclusive distribution arrangements to earn returns. Products are varied and always in demand in the market. All connections and modus operandi are already existing since this is not a new business operation.

What is this Rate of Return?

Rate of Return (RoR)- is the loss or gain of a business venture over a certain period, expressed as a percentage of the initial cost. A positive RoR means the position has made a profit, while a negative RoR means a loss.

What is the time period for a RoR to be completed?

An agreement last eighteen (18) calendar months from the time entered into or from the closing sale of the agreement.

When can I or do I expect a payout?

Payout of Rates of Return are announced and disbursed within two (2) months after the Agreement Period has ended.

How is my Rate of Return Calculated?

Rates of Return is expressed and calculated as a percentage of the earned profits from operations. Look at this example;

You bought a \$100.00 Agreement for eighteen (18) months. This sum will be used towards regular operations by the company.

When the company carries out its regular business operations it may cost the company \$700.00 to procure a supply of commodities, the commodities are sold at a higher value than the purchase price say \$1000.00; Profits earned will be $\$1000 - \$700 = \$300.00$;

The profit as a RoR will be $\$300 / \$700 \times 100\% = 42.86\%$; This 42.86% is now calculated on the initial Agreement Price of \$100.00 to arrive at \$42.86

The payout is then your first $\$100 + \$42.86 = \$142.86$; The first bought amount is re-paid only once; the RoR is done on all procurement transactions within the Agreement period.
